**C. Accounting Policy**

Life premiums are recognized as income over the premium-paying period of the related policies. Annuity considerations are recognized as revenue when received. Health premiums are earned ratably over the terms of the related insurance and reinsurance contracts or policies. Expenses incurred in connection with acquiring new insurance business, including acquisition cost such as sales commissions, are charged to operations as incurred.

The amount of dividends to be paid to participating policyholders is determined annually by the Company's Board of Directors. The aggregate amount of participating policyholders' dividends is related to actual interest, mortality, morbidity, and expense experience for the year and judgment as to the appropriate level of statutory surplus to be retained by the Company.

**(2) Basis for Bonds and Amortization Schedule**

Bonds not backed by other loans are stated at amortized cost using the modified scientific method.

**(6) Basis for Loan-Backed Securities and Adjustment Methodology**

Loan-backed securities are stated at amortized cost. The retrospective adjustment methodology is used for asset-backed, CMO, and Mortgage-backed securities.

**D. Going Concern**

After evaluating the entity's ability to continue as a going concern, management was not aware of any conditions or events which raised substantial doubts concerning the entity's ability to continue as a going concern as of the date of the filing of this statement.

**NOTE 2 Accounting Changes and Corrections of Errors**

## (3) Policies when Transfers Between Levels are Recognized

Transfers between level 2 and 3 are recognized at the beginning of the period.

## (4) Description of Valuation Techniques and Inputs Used in Fair Value Measurement

Included in various investment related line items in the statutory financial statements are certain financial instruments carried at fair value. Other financial instruments are periodically measured at fair value, such as when impaired, or for certain bonds and preferred stock when carried at the lower of cost or market.

Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability (exit price) in an orderly transaction between market participants at the measurement date. In determining fair value, the Company uses various methods including market, income and cost approaches. The market approach utilizes prices and other relevant information generated by market transactions involving identical or comparable assets and liabilities. The income approach uses discounted cash flows to determine fair value. When applying either approach, the Company maximizes the use of observable inputs and minimizes the use of unobservable inputs. Observable inputs reflect the assumptions market participants would use in valuing a financial instrument based on market data obtained from sources independent of the Company. Unobservable inputs reflect the Company's estimates about the assumptions market participants would use in valuing financial assets and financial liabilities based on the best information available in circumstances.

The Company is required to categorize its assets and liabilities that are carried at estimated fair value on the statutory statements of admitted assets, liabilities, and capital and surplus into a three level hierarchy based on the priority of the inputs to the valuation technique in accordance with SSAP No. 100R, Fair Value Measurements. The fair value hierarchy gives the highest priority to quoted prices in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3). If the inputs used to measure estimated fair value fall within different levels of the hierarchy, the category level is based on the lowest priority level input that is significant to the fair value measurement. The levels of the fair value hierarchy are as follows:

- Level 1 – Fair value is based on unadjusted quoted prices for identical assets and liabilities in an active market at the measurement date. The types of assets and liabilities utilizing Level 1 valuations generally include cash and short-term investments, separate account assets and exchange traded derivatives.

- Level 2 – Fair value is based on significant inputs, other than quoted prices included in Level 1 that are observable in active markets or that are derived principally from or corroborated by observable market data through correlation or other means for identical or similar assets and liabilities. The types of assets and liabilities utilizing Level 2 valuations generally include U.S. government agency securities, municipal bonds, foreign government debt, certain corporate debt, asset-backed, mortgage-backed, unaffiliated surplus notes, capital notes, and private placement securities, derivatives, common stocks, securities lending reinvested collateral and cash equivalent securities.

- Level 3 – Fair value is based on unobservable inputs for the asset or liability for which there is little or no market activity at the measurement date. Unobservable inputs used in the valuation reflect management's best estimate about the assumptions market participants would use to price the asset or liability. The types of assets and liabilities utilizing Level 3 valuations generally include certain corporate debt, asset-backed or mortgage-backed securities, common stocks, other invested assets and derivative securities.

## NOTES TO FINANCIAL STATEMENTS

**B. Fair Value Reporting under SSAP No. 100R and Other Accounting Pronouncements**

Derivatives - The Company enters into long term investments comprised of currency and equity futures, equity index put options, equity index call options and interest rate swaptions to economically hedge liabilities embedded in certain variable annuity and fixed indexed annuity products. The currency and equity futures are exchange traded derivatives and the fair value is based on an active market quotation. The Company has classified the fair values of the exchange traded derivatives as Level 1. The equity index put options, equity index call options, and interest rate swaptions are valued using pricing models with inputs that are observable in the market or can be derived principally from or corroborated by observable market data. These derivative assets are classified as Level 2 assets.

**D. Not Practicable to Estimate Fair Value - NONE**

**NOTE 21 Other Items**
**C. Other Disclosures**

In March of 2024, the NAIC adopted a new definition of a bond (i.e., investments that are eligible for reporting on Schedule D) in its principles-based bond definition project and introduced a new framework under Statutory Accounting Principles. The new bond definition is narrower than the previous guidance and is intended to capture the economic substance of the securities in a portfolio. A bond is defined as a security that represents a creditor relationship whereby there is a fixed schedule for one or more future payments, and which qualifies as either an issuer creditor obligation or asset-backed security. The new NAIC guidance was effective January 1, 2025.

(1) Aggregate Book Adjusted Carrying Value for all securities reclassified off Schedule D Part 1  
The Company reclassified \$61,028,850 in capital notes from Schedule D Part 1 to Schedule BA.

(2) Aggregate Book Adjusted Carrying Value after transition for all securities reclassified off Schedule D Part 1 that resulted with a change in measurement basis  
The Company has \$9,502,600 of capital notes with a NAIC rating of 3 which requires a measurement basis of lower of amortized cost or fair value.

(3) Aggregate surplus impact for securities reclassified off Schedule D Part 1  
The Company has a \$49,565 reduction in book adjusted carrying value of certain NAIC 3 capital notes being lower than amortized cost.

The Company did not elect to account for residuals using the practical expedient and instead will account for residuals using the Allowable Earned Yield method. Residuals are initially reported at cost, or allocated cost. Subsequent to the initial acquisition, residuals are reported at either the lower of amortized cost or fair value under the Allowable Earned Yield method. The Allowable Earned Yield is established at acquisition as the discount rate that equates the initial best estimate of the residual's cash flows to its acquisition cost. Interest income is recorded under the effective yield method using the Allowable Earned Yield, capped by the amount of cash distributions received. Residuals are assessed for other-than-temporary impairment (OTTI) on an ongoing basis, with required assessment any time that fair value is less than the reported value.

**J. Reporting Net Negative (Disallowed) Interest Maintenance Reserve (IMR)**

The Company admitted net negative (disallowed) Interest Maintenance Reserve ("IMR") as of June 30, 2025.

The Company attests that:

- i. Fixed income investments generating IMR losses comply with the reporting entity's documented investment or liability management policies.
- ii. IMR losses for fixed income related derivatives are all in accordance with prudent and documented risk management procedures, in accordance with a reporting entity's derivative use plans and reflect symmetry with historical treatment in which unrealized derivative gains were reversed to IMR and amortized in lieu of being recognized as realized gains upon derivative termination.
- iii. Any deviation to 13.c.i was either because of a temporary and transitory timing issue or related to a specific event, such as a reinsurance transaction, that mechanically made the cause of IMR losses not reflective of reinvestment activities.

## NOTES TO FINANCIAL STATEMENTS

iv. Asset sales that were generating admitted negative IMR were not compelled by liquidity pressures (e.g., to fund significant cash outflows including, but not limited to excess withdrawals and collateral calls).
